Quiz Report: Search Engine Metrics

My Word: Savaş

1. Target word appearing on multiple URLs: **Savaş**

2. Analyzed URLs

- https://www.hurriyet.com.tr/...
- https://www.haber7.com/
- https://kutuphane.itu.edu.tr/arastirma/itu-yayinlari

3. Data from Database

- **Entry 1:** Frequency: 23, Depth: 0
- **Entry 2:** Frequency: 10, Depth: 0
- **Entry 3:** Frequency: 2, Depth: 2

4. Manual Score Calculations

Formula: score = (frequency x 10) + 1000 (exact match bonus) - (depth x 5)

```
Entry 1 score: ( 23 x 10 ) + 1000 - ( 0 x 5 ) = 1230

Entry 2 score: ( 10 x 10 ) + 1000 - ( 0 x 5 ) = 1100

Entry 3 score: ( 2 x 10 ) + 1000 - ( 2 x 5 ) = 1010
```

Highest score matches API's #1 result? Yes

5. Project Data Table (Summary)

URL	Frequency	Depth	Score
https://www.hurriyet.com.tr/...	23	0	60
https://www.haber7.com/	10	0	10
https://kutuphane.itu.edu.tr/arastirma/itu-yayinlari	2	2	8

6. Comparison & Analysis

API results match the ranking order of the table above. The Top result has a high score (60) because the word "Savaş" appears directly in the HTML <title> tag, adding a +50 bonus. Results with Depth 0 rank higher due to our (10 - depth) ranking factor.

7. Enhanced Search with Chain-of-Thought (CoT)

1. **Analyze Query:** Identify if the word is a general term or a specific entity.
2. **Identify Intent:** Prioritize real-time news over archived data during active global context.
3. **Contextual Ranking:** Boost pages where the word appears in header tags (h1, h2).
4. **Verification:** Cross-check snippets for semantic relevance.
